CERTIFICATE

This is to certify that the project titled **SMART CITY CONNECT: AN ISSUE REPORTING APPLICATION** is a record of the bonafide work done by **Maaz Shaikh** Reg. No. 220906568 submitted in partial fulfilment of the requirements for the award of the Degree of Bachelor of Technology (B.Tech.) in **ELECTRICAL AND ELECTRONICSENGINEERING** of Manipal Institute of Technology, Manipal, Karnataka, (A Constituent unit of Manipal Academy of Higher Education), during the academic year 2026.

Dr. SOWMYA R.
*Assistant Professor - Senior Scale,
School of Electrical Engineering,
MIT, MAHE Manipal*

Dr. Jayalakshmi NS
*School of Electrical Engineering,
M.I.T., MANIPAL*

(An ISO 9001: 2015 & ISO 27001:2013 Certified Company)

Ref. No. ITG-IT/1202/INTERNSHIP/2026/415

Date: 11.05.2026

TO WHOM IT MAY CONCERN

This is to certify that Kum. Maaz Ahmed Shaikh, VIIth Semester student of Bachelor of Technology in Electrical & Electronics Engineering, Manipal Institute of Technology, Manipal, Karnataka, has successfully completed internship program at our organization from 12th January 2026 to 8th May 2026.

During the period of his/her internship program at our organization, we found him/her punctual, sincere and hardworking.

We wish him/her every success in all his future endeavors.

(Saresh Varghese)
Chief Technical Officer

To,
Kum. Maaz Ahmed Shaikh,
VIIth Semester, Bachelor of Technology in Electrical & electronics Engineering,
Manipal Institute of Technology,
Manipal, Karnataka,

IT HUB, 3rd Floor, Altinho, Panaji-Goa. Pin: 403 001

Email: md-itg.goa@nic.in Telephone (Off): 0832 2226024/2224192 Web: <https://infotech.goa.gov.in>

ACKNOWLEDGMENTS

I am truly grateful to Info tech for giving me the opportunity to intern at their organization. This experience as a whole has been invaluable, and I appreciate the trust and support extended to me.

And I would like to express my gratitude and utmost respect to my mentor, Dr. Sowmya R, for her invaluable guidance and steadfast support throughout this journey. Her encouragement was instrumental in building my confidence and enabling me to approach each task with determination.

I would also like to sincerely thank Akshay Deulkar and Shruti Surlakar for being a incredible team for their spirit of co-learning, growth, and collaboration, and for always being reliable and supportive whenever I needed help and guidance. Working with them made this journey all the more enriching and rewarding

ABSTRACT

Smart Cities are always facing issues such as potholes, garbage accumulation, damaged streetlights, water leakage, traffic-related problems, and public safety concerns. And traditional complaining systems are very slow, To address these challenges, the application named “**Smart City Connect**” is developed by us which is an Android-based issue reporting application that enables citizens to report civic problems directly to authorities using photographs, location details, and textual descriptions. This application helps to improve communication between citizens and municipal authorities while supporting smart city initiatives through public engagement

This application was developed using the software Android Studio with Java/XML and Firebase database integration for real-time data storage with authentication. Users can capture images of issues by uploading them in our server, uploading descriptions, and submitting reports through a friendly user interface. The system stores issue details and also enables efficient issue tracking . The developed application demonstrates improved accessibility, faster reporting technique, enhance citizen participation, and efficient urban issue monitoring. The project contributes towards a digital transformation, and a very sustainable digital development.

CHAPTER 1 - INTRODUCTION

1.1 Introduction

A smart city utilizes information and communication technologies gained from electronic devices and sensors to improve the quality of urban services and enhance citizens lifestyles. Rapid urbanization has caused a number of civic issues such as waste accumulation, road damage, drainage problems, and infrastructure failures. The Smart City Connect App provides a digital platform where citizens can directly report issues through their smartphones by uploading relevant photos and information to the app.

1.2 Motivation

The motivation behind this project is the need for faster and more transparent civic issue reporting systems. Existing systems are often manual and inefficient. With the growth of smart phone usage and internet connectivity, mobile applications can help bridge the communication gap between citizens and authorities.

1.3 Relevance of the Work

The project supports smart governance initiatives by improving communication between citizens and municipal authorities. It enables real-time reporting, reduces paperwork, and promotes digital transformation in urban administration.

1.4 Impact on Environment and Society

The application contributes towards cleaner cities by enabling faster reporting of garbage and sanitation issues. It promotes safer roads, better infrastructure maintenance, and increased public participation in city management.

1.5 Ethics in Engineering Practices

The application follows ethical principles such as user privacy, secure data handling, transparent complaint management, and responsible use of technology for public welfare.

CHAPTER 2 - LITERATURE REVIEW AND OBJECTIVES

2.1 Literature Review

Smart city technologies have become an important area of research due to the rapid growth of our populations and has increased civic infrastructural challenges. Cities have frequently faced problems such as potholes, garbage accumulation and water leakage, traffic congestion, damaged streetlights, and public safety. Traditional complaint management systems often rely on manual processes, phone calls, or physical visits to municipal offices, which lead to delayed responses and inefficient issue. To overcome these limitations, several digital civic issue reporting platforms and smart governance applications have developed to overcome this .

One of the widely used applications in India is the Swachhata App developed under the Swachh Bharat Mission. The application enabled citizens to report sanitation related issue such as garbage overflow , and the waste accumulation by uploading images and location details. Although this system improves public participation in cleanliness, it mainly focuses on sanitation and lacks support for the multiple civic issues categories and emergency services.

Another significant platform is FixMyStreet, which allowed citizens to report local infrastructural problems including potholes and streetlight failures, and road damage and problems. This platform provided map based complaint registration and public issue visibility. However, the application is primarily designed for specific region and its scalability and customization for Indian smart city environments have remained limited.

2.2 Objectives

1. To design and develop a mobile application that allows citizens to report civic issues and to create a simple and user friendly interface that makes the complaint submission easy and it provides quick access to emergency service through the application.
2. To allow users to attach images and location coordinates while reporting issues and to implement a complaint tracking system so users can monitor the progress of their complaints.

CHAPTER 3 - METHODOLOGY

3.1 System Methodology

The application follows a strict modular software development methodology. Users register and log in to the system, select issues in the given categories, upload image, provide description and submit complaints to the database for further action.

3.2 Modules of the System

User Module: Handles user registration and sign up login through google sign up

Complaint Module: Allows users to upload complaints with images and proper description.

Database Module: Stores user and complaint information using Firebase database.

Admin Module: Allows authorities to monitor and manage the reported issues.

3.3 Hardware and Software Requirements

Software/Hardware	Purpose
Android Studio	Application development
Java/XML	Programming language and UI
Firebase	Cloud database and authentication
Android Device	Application testing
Internet Connection	Data synchronization

3.4 Development And Execution Tasks

Implemented a secure user authentication system using Firebase Database Authentication to enable users to register and log in to the application. The system supports both Email/Password authentication and Google Sign-In, ensuring ease of access and secure session management.

Key Activities:

1. Integrated Firebase Authentication into the Android application.
2. Implemented Email and Password-based user registration and login.
3. Configured Google Sign-In using Firebase Authentication.
4. Managed user sessions to maintain login state across the app.

5. Stored authenticated user data such as name and Phone number.

3.5 User Profile Management

Overview:

Implemented a user profile module to allow users to manage personal details within the application.

Key Activities:

1. Developed profile UI for displaying user information and location.
2. Retrieved user data from FirebaseAuth.
3. Implemented editable fields such as phone and address and profile pic.
4. Stored profile data using SharedPreferences concept.
5. Integrated profile image selection.
6. Ensured data persistence in sessions.

CHAPTER 4 - IMPLEMENTATION RESULTS AND SCREEN ANALYSIS

4.1 User Login Screen

The login screen enables registered users to securely access the Smart City Connect application using email and password. Firebase Database Authentication is integrated to provide secure login validation and session management.

Fig. 4.1 user login screen

4.2 User Registration Screen

The registration screen allows new users to create accounts using personal details such as full name, email address, and password. Google Sign-In integration was also implemented to simplify the authentication process.

Fig. 4.2 User registration screen

4.3 Application Dashboard

The dashboard serves as the central interface of the application. Users can report civic issues, track complaint status, access emergency SOS services, and use utility-related options through a user-friendly interface.

Fig. 4.3 Application Dashboard

4.4 Issue Reporting Module

The issue reporting module enables users to upload photographs of issues, fetch GPS coordinates, provide descriptions, and submit complaints directly to the Firebase database.

Fig. 4.4 Issue Reporting Module

4.5 Google Authentication Integration

Google Authentication integration improves security and user convenience by allowing users to sign in using their Google accounts without manually creating credentials.

Fig 4.5 Google Authentication integration

4.6 Complaint Tracking System

The complaint tracking module allows users to monitor the progress of submitted complaints using different status stages such as Reported, Assigned, In Progress, and Resolved.

Fig. 4.6 Complaint tracking system

4.7 Fire Emergency Reporting Module

The Fire SOS module enables users to send emergency alerts related to fire accidents. Evidence photographs and GPS location details help emergency teams respond more effectively.

Fig. 4.7 Fire emergency reporting module

4.8 Medical Emergency Reporting Module

The Medical SOS module allows users to request ambulance and emergency medical assistance by sharing incident images and real-time location information.

Fig. 4.8 Medical Emergency Reporting Module

4.9 Police Emergency Reporting Module

The Police SOS module helps users alert police authorities during emergencies. The system captures evidence photographs and location coordinates for quick action.

Fig 4.9 Police Emergency Reporting Module

4.10 Firebase Authentication Analytics

Firestore analytics provide insights into daily and monthly active users. These analytics help evaluate application usage.

Fig 4.10. Firebase Authentication analysis

4.11 Firebase Database

Firebase is used as the backend database for user details, complaints, SOS requests. Firebase provides secure real-time cloud storage and synchronization.

Fig. 4.11 Firebase Database

CHAPTER 5 - CONCLUSION AND FUTURE SCOPE

5.1 Summary

The Smart City Connect application provides a simple and efficient platform for reporting civic issues and emergency situations. The application allows citizens to upload issue photographs, provide, and share location coordinates details directly with authorities through their smartphones. Firebase Authentication and google cloud control was integrated to provide secure login functionality and real-time database storage.

The developed system improves communication between citizens and municipal authorities while encouraging public participation in smart city management. The application also provides emergency SOS modules for fire, medical, and police emergencies to improve public safety and accessibility.

5.2 Conclusion

The Smart City Connect application was made to achieve the objectives of developing a user-friendly Android-based civic issue reporting system. The application demonstrates how modern mobile technologies and cloud-based databases can improve urban issue management and emergency response systems.

The integration of complaint tracking, GPS location services, image upload functionality, and secure authentication provides an effective and reliable digital solution for smart governance. The project contributes towards digital transformation, better urban infrastructure management, and increased citizen engagement in smart city initiatives.

5.3 Future Scope

The Smart City Connect application can be further enhanced with additional features and advanced technologies in the future. Artificial Intelligence can be integrated for automatic issue classification and prioritization.

The application can also be integrated with municipal dashboards and IoT-based sensors. Multi language support can improve accessibility for users from different regions. Future development may also include real-time chat support, advanced analytics, and machine learning techniques for predictive analysis of urban issues.

ANNEXURES

Annexure 1 PO & PSO Mapping

Note: use a tick mark if you have addressed that PO and PSO in your work

PO No	PO	✓ tick
PO1	Engineering Knowledge - Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.	
PO2	Problem analysis - Identify, formulate, research literature, and analyse complex engineering problems reaching sustained conclusions using first principles of mathematics, natural sciences, and engineering sciences.	✓
PO3	Design/Development of Solutions - Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate considerations for the public health and safety, and the cultural, societal, and the environmental considerations.	✓
PO4	Conduct investigations of complex problems - Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.	
PO5	Engineering tool usage - Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling complex engineering activities with an understanding of the limitations.	✓
PO6	The engineer and the world - Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.	
PO7	Ethics - Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.	✓
PO8	Individual and collaborative teamwork - Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.	✓
PO9	Communication - Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.	✓
PO10	Project management and finance - Demonstrate knowledge and understanding of the engineering, as a member and leader in a team, to manage projects and in multidisciplinary environments.	
PO11	Life-long learning - Recognize the need for and have the preparation and ability to engage in independent and life-long learning	✓
PSO1	Analyse efficient electrical systems and engineering models by applying electrical engineering principles.	
PSO2	Design and develop sustainable application-oriented electronic systems.	

PSO3	Develop intelligent systems using programming and simulation tools	✓
------	--	---

Expand the mapping with different level and give justifications:

PO and PSO number	Addressed in which chapter	Justification	Level: 0: Not related 1: Low 2: Medium 3: Strong
PO1	Chapter 3 – Methodology	Applied engineering knowledge, programming concepts	
PO2	Chapter 2 – Literature Review and Objectives	Analysed existing complaint management systems	2
PO3	Chapter 3 & 4	Designed and developed a complete Android application solution with complaint reporting	3
PO4	Chapter 4 – Result Analysis	Conducted testing of application	
PO5	Chapter 3 – Software and Tools Used	Used modern engineering and IT tools such as Android Studio	3
PO6	Chapter 1 – Impact on Environment and Society	The application addresses societal issues like sanitation, public safety	
PO7	Chapter 1 – Ethics in Engineering Practices & Chapter 3 – Development Tasks	Applied ethical principles through secure user authentication, responsible data handling, privacy protection, and transparent complaint management in the application.	2

PO8	Chapter 3 – Development and Execution Tasks	Worked collaboratively with team members during application development, module integration, debugging, and testing, demonstrating effective teamwork and cooperation	2
PO9	Entire Report / Chapter 4 – Result Analysis	Demonstrated effective technical communication through application design documentation, project report preparation, interface presentation, and explanation of implementation results	2
PO11	Chapter 5 – Future Scope & Chapter 2 – Literature Review	Demonstrated the ability for independent and lifelong learning by researching smart city technologies, studying existing civic issue reporting systems, and exploring future advancements such as AI, IoT, and predictive analytics for further application enhancement	2
PSO3	Chapter 3 & 4	Used programming tools, Firebase cloud services,	3

Annexure 2

LO MAPPING

Note: use a tick mark if you have addressed that LO in your work

PLO No	LO	✓ tick
C1	Apply knowledge of mathematics, statistics, natural science and engineering principles to the solution of complex problems. Some of the knowledge will be at the forefront of the particular subject of study	
C2	Analyse complex problems to reach substantiated conclusions using first principles of mathematics, statistics, natural science and engineering principles	✓
C3	Select and apply appropriate computational and analytical techniques to model complex problems, recognising the limitations of the techniques employed	✓
C4	Select and evaluate technical literature and other sources of information to address complex problems	
C5	Design solutions for complex problems that meet a combination of societal, user, business and customer needs as appropriate. This will involve consideration of applicable health & safety, diversity, inclusion, cultural, societal, environmental and commercial matters, codes of practice and industry standards	✓
C6	Apply an integrated or systems approach to the solution of complex problems	
C7	Evaluate the environmental and societal impact of solutions to complex problems and minimise adverse impacts	
C8	Identify and analyse ethical concerns and make reasoned ethical choices informed by professional codes of conduct	✓
C9	Use a risk management process to identify, evaluate and mitigate risks (the effects of uncertainty) associated with a particular project or activity	
C10	Adopt a holistic and proportionate approach to the mitigation of security risks	
C11	Adopt an inclusive approach to engineering practice and recognise the responsibilities, benefits and importance of supporting equality, diversity and inclusion	✓
C12	Use practical laboratory and workshop skills to investigate complex problems	
C13	Select and apply appropriate materials, equipment, engineering technologies and processes, recognising their limitations	
C14	Discuss the role of quality management systems and continuous improvement in the context of complex problems	
C15	Apply knowledge of engineering management principles, commercial context, project and change management, and relevant legal matters including intellectual property rights	
C16	Function effectively as an individual, and as a member or leader of a team	✓
C17	Communicate effectively on complex engineering matters with technical and non-technical audiences	✓
C18	Plan and record self-learning and development as the foundation for lifelong learning/CPD	✓

Expand the mapping with different levels and give justifications:

IET LO number	Addressed in which chapter	Justification	Level: 0: Not related 1: Low 2: Medium 3: Strong
C1	Chapter 3 – Methodology	Applied engineering principles, Android development concepts, database integration, and software technologies to develop the Smart City Connect application.	
C2	Chapter 2 – Literature Review	Analysed limitations of existing civic issue reporting systems and identified problems related to delayed responses and inefficient complaint handling.	3
C3	Chapter 3 – Software and Tools Used	Used computational tools such as Android Studio, Firebase.	3
C4	Chapter 2 – Literature Review	Reviewed technical papers, smart city applications.	
C5	Chapter 1 & 3	Designed a user-friendly civic issue reporting system addressing public safety.	3
C6	Chapter 3 – System Methodology	Integrated multiple modules such as authentication, complaint management, GPS tracking application.	
C7	Chapter 1 – Impact on Environment and Society	The project promotes cleaner cities, better infrastructure maintenance.	
C8	Chapter 1 – Ethics in Engineering Practices	Addressed ethical considerations including secure data handling, user privacy.	2
C9	Chapter 3 – Development Tasks	Identified and managed risks related to authentication security, data storage reliability, and user access management during development.	
C10	Chapter 3 & 4	Implemented Firebase Authentication and secure cloud storage mechanisms to reduce risk.	

C11	Chapter 1 – Relevance of the Work	The application supports inclusivity emergency reporting facilities for all citizens.	
C12	Chapter 4 – Implementation Results	Performed practical implementation, testing, debugging, and module integration using Android devices and Firebase tools.	
C13	Chapter 3 – Software and Tools Used	Applied modern engineering technologies such as Android Studio.	
C14	Chapter 4 – Result Analysis	Continuous testing and performance evaluation were conducted.	
C15	Chapter 3 – Project Development	Applied project planning, module execution, software management, and documentation practices throughout the project lifecycle.	
C16	Chapter 3 – Development and Execution Tasks	Worked collaboratively with team members during development, testing, debugging, and implementation phases of the project.	2
C17	Entire Report	Demonstrated effective communication through technical design.	2
C18	Chapter 5 – Future Scope	Explored new technologies such as AI integration, IoT systems,	2

1. SDG 9 – Industry, Innovation and Infrastructure:

The Smart City Connect application supports SDG 9 by promoting innovative digital infrastructure solutions for efficient civic issue management and smart urban development.

2. SDG 11 – Sustainable Cities and Communities:

The project strongly aligns with SDG 11 by contributing toward safer, cleaner, and more sustainable urban communities through citizen participation and smart governance.
